

## FLOORSTAND FOR MICROSOFT HUB2

Vision's VFM-F10 Halo has an aesthetic which leans into the user and has a sense of stability. Big wheels make it easy to move, and the geometry is designed to minimize trip hazards so the user can interact with the display as naturally as possible, while still meeting tough UL1678 stability regulations. The fine structure perfectly compliments Microsoft's Hub2.

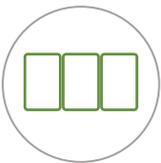

### UL1678 Approved

The display is installed, wheels are locked and the floor tipped 10° in all directions while the stand remains upright. This limits the SWL of the stand to 45 kg.

### Tilt functionality

When seated the stand can lean forward to vertical reducing glare and correctly positioning the conference camera.

### Side-by-side

The legs are not wider than the display in portrait mode so multiple displays can be parked next to each other.

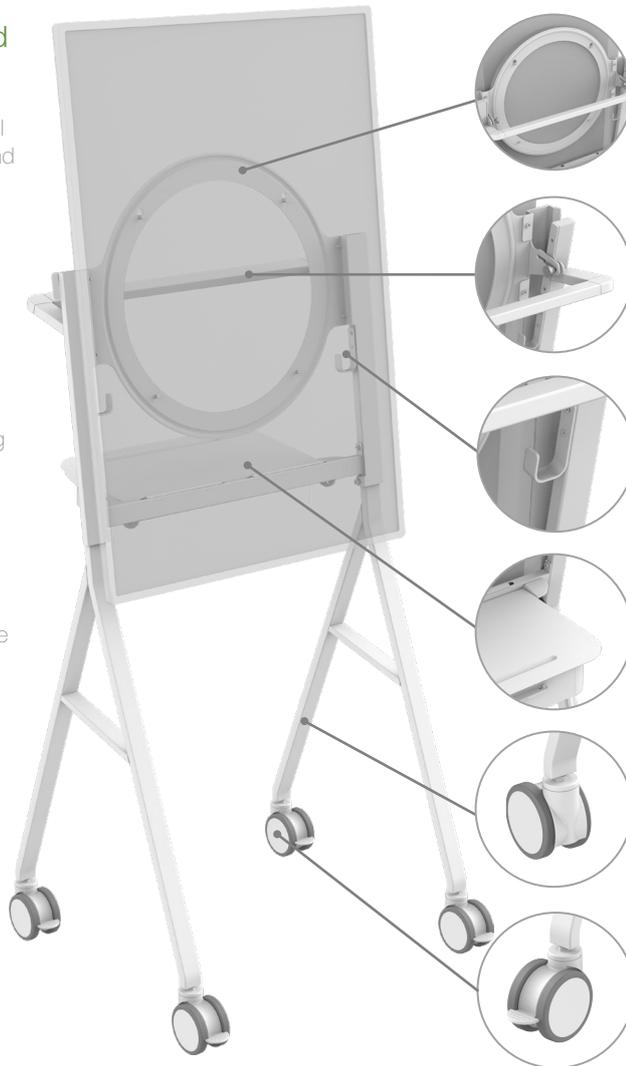

### Portrait or landscape

The Hub2 can be fixed to the stand in either portrait or landscape.

### Optional Hub battery bracket

A bracket is available which supports the Microsoft APC battery for Hub2 underneath the shelf, out of the way. Available 2020 Q2.

### 350x350 Halo

The Halo perfectly matches the round "bump" on the back of the Hub2.

### Transport handle

A convenient carry handle makes moving the stand from room to room quick, easy, safe and comfortable.

### Cable Hooks

Keep unsightly cable out of view and tidy at the back of the stand.

### Flip-up Shelf

The flip-up rear shelf is 18.1" (460mm) wide – big enough for a laptop and mouse.

### Cable Management

Hide cables in the lower section of the rear legs, reducing the chance of the wheels rolling over cables.

### 4" Wheels

Medical-grade 4" (100 mm) lockable castors glide over any bumps, making the stand easy to pull even on deep carpet and reducing vibration protecting your AV equipment.
