

Heavy-duty floor stand

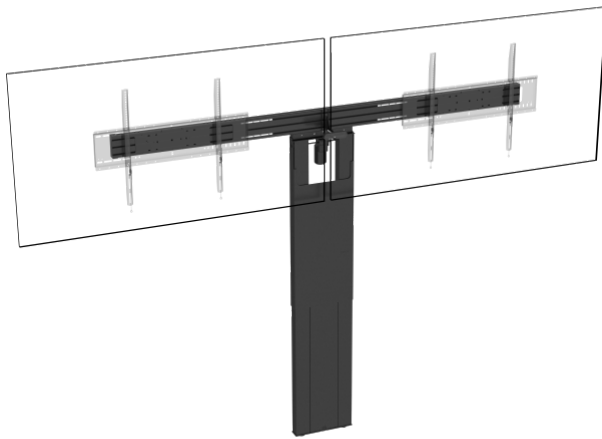

Fixes to wall, transfers load to floor

Supports two displays up to 95 kg (209 lb) in total

Centre camera shelf included

800 mm / 31.5" height adjustment, non-motorised

[Note: once installed the height cannot be adjusted]

Need to install a Microsoft Teams or Zoom room? Vision's VFM-F51 Dual floor stand makes it easy to install two displays on one mount. This kit comprises the wall-fixing F51 with a dual-display adaptor rail, and a second wall mount.

The F51 has manual height adjustment, so you can raise it high for bigger rooms, or lower it to align with the height of a meeting table.

Components included:

SWL 95 kg (209 lbs)

The F51 uses heavy-gauge components to support the weight. The weight of all displays combined cannot exceed this.

Three cartons

This kit contains 1 x VFM-F51 floor stand, 1 x VFM-F50_DL rail accessory, and 1 x VFM-W8X6 wall mount. If you need a different combination you can order each part separately.

Highly Adjustable Wall Brackets

Two brackets attach the lower part of the F51 to the wall. These brackets allow you to secure the column either almost flush to the wall or standing out from the wall to allow cable channels to pass behind.

Feet or Fixed

Adjustable feet make levelling adjustment simple. Or remove the feet and fix the column to the floor.

Hide Mess

The front cover is removable, facilitating cable routing. And you can conceal source devices or power distribution boards inside the column.

Landscape or Portrait

Vision's VESA mounts support portrait or landscape orientation.

800 mm / 31.5" Height Adjustment

The height of the display can be altered during assembly to suit the audience.

Camera Shelf

Positioning the camera at the center of the two screens enhances the impression of natural eye contact for remote participants. The F51 stand offers the flexibility to fix a center shelf above, below, or between the two screens. If using a smaller camera like the Logitech Brio, the platform part of the shelf assembly can be omitted.

2 x Displays

Support two displays from 55" to 86". Each display can weight up to 45 kg. The aluminium rail comes in three parts and allows side to side adjustment of the displays.
