

- Portable heavy-duty mobile cart
- Supports two displays up to 80 kg (176 lb) in total
- Centre camera shelf included
- 800 mm / 31.5" height adjustment
- [Note: once installed the height cannot be adjusted]
- Removable wheels for non-portable variation
- Removable rear legs to lean against walls

Need to install a Microsoft Teams or Zoom room? Vision's VFM-F51T Dual trolley makes it easy to install two displays on one floor stand. This kit comprises the portable F51T with a dual-display adaptor rail, and a second wall mount.

The F51T has manual height adjustment, so you can raise it high for bigger rooms, or lower it to align with the height of a meeting table.

Components included:

SWL 80 kg (176 lbs)

The F51T uses heavy-gauge components to support the weight. The weight of all displays combined cannot exceed this.

Four cartons

This kit contains 1 x VFM-F51T floor stand (comes in two cartons strapped together), 1 x VFM-F50_DL rail accessory, and 1 x VFM-W8X6 wall mount. If you need a different combination you can order each part separately.

Hide Mess

The front cover is removable, facilitating cable routing. And you can conceal source devices or power distribution boards inside the column.

Landscape or Portrait

Vision's VESA mounts support portrait or landscape orientation.

800 mm / 31.5" Height Adjustment

The height of the display can be altered during assembly to suit the audience.

Camera Shelf

Positioning the camera at the center of the two screens enhances the impression of natural eye contact for remote participants. The F51T stand offers the flexibility to fix a center shelf above, below, or between the two screens. If using a smaller camera like the Logitech Brio, the platform part of the shelf assembly can be omitted.

2 x Displays

Support two displays from 55" to 86". Each display can weight up to 40 kg. The aluminium rail comes in three parts and allows side to side adjustment of the displays.

Non-Portable / Free-Standing

Sometimes users need a non-portable free-standing solution, so simply remove the wheels and fit the adjustable feet. The feet are low profile to reduce trip hazards.

Glass Walls

Do you have a meeting room with a non-structural or glass wall? The F51T feet can be configured to safely support the stand leaning against glass. Changing the rear leg angle allows positioning the display against the wall without any load on it.
